

Certificate of Compliance REACH Regulation 1907/2006 / EC Article 33 (SVHC List)

The REACH regulation provides that substances of very high concern (SVHC) are subject to specific authorization. Article 33 of the REACH Regulation requires producers and distributors to inform users of the presence of substances of concern when their concentration exceeds 0.1% (w / w).

Under European Union Regulation 1907/2006 / EC on the Registration, Evaluation, Authorization and Restriction of Chemicals, we comply with our duty to inform you that certain components of our products may contain a percentage of lead greater than 0.1% (w / w). This only concerns the components made by machining (steel screws and bolts, and brass sockets).

The low percentage of lead in some metal alloys is common and improves their machinability. To the best of our knowledge, these alloys pose no particular health risk because the lead release rate (by tactile transfer or other) remains insignificant.

FELCO SA assumes its regulatory duties and obligations and has set up an internal team to monitor and verify the compliance implementation.

FELCO SA remains in constant contact with its upstream suppliers. We can therefore attest that to the best of our knowledge, our products are not subject to any manufacturing or quality restrictions.

This certificate is based on information provided in good faith by our suppliers that we regard as reliable. However, we are not responsible for the accuracy of the data provided by third parties.
